- WARNING** - Dinghy must be secured / tied down before transporting.
- WARNING** - Regular inspection, adjustment, and maintaining your davit and other associated components is necessary to ensure proper operation.
- WARNING** - Always clean the Chock system with fresh water when it is used in a corrosive environment to maintain longevity.
- CAUTION:** - It is suggested to off-set the Chock, during installation, on the platform so that the stern of the dinghy is more supported due to weight of motor, etc.
- CAUTION** - Weight limit: 725 pound safe working load limit.
Do not exceed weight load limit.

Your **Hurley Chock** system is made of Marine Grade High Density Polyethylene Cradles and Stainless Steel components and hardware. This Chock system allows scuff-free maneuvering of your hard or soft bottom dinghy.

The chocks can be positioned, or removed, in the multiple holes provided for the best position for your tenders hull. For soft bottom dinghies, you may want to remove the chocks.

Planning the installation: Make sure the Chocks are properly aligned and in place before securing. You may want to off-set the Chock depending on your dinghies weight distribution. You may want to offset the davit on the platform so that the stern of the dinghy is more supported due to weight of motor, etc. Of course this depends on many factors, including, but not limited to, the beam of your boat, length of your dinghy and any obstructions. Distance between cradles should be no less than 36" and dependant upon the length of your tender. *Measure twice, drill once!*
